Carbamates in Fruits and Vegetables

Waters Corporation

This is an Application Brief and does not contain a detailed Experimental section.

Abstract

Carbamates have been identified as a health risk. They affect the nervous system by reducing the ability of cholinesterase, an enzyme, to function properly in regulating the neurotransmitter acetylcholine.

Introduction

Carbamates have been identified as a health risk. They affect the nervous system by reducing the ability of cholinesterase, an enzyme, to function properly in regulating the neurotransmitter acetylcholine.

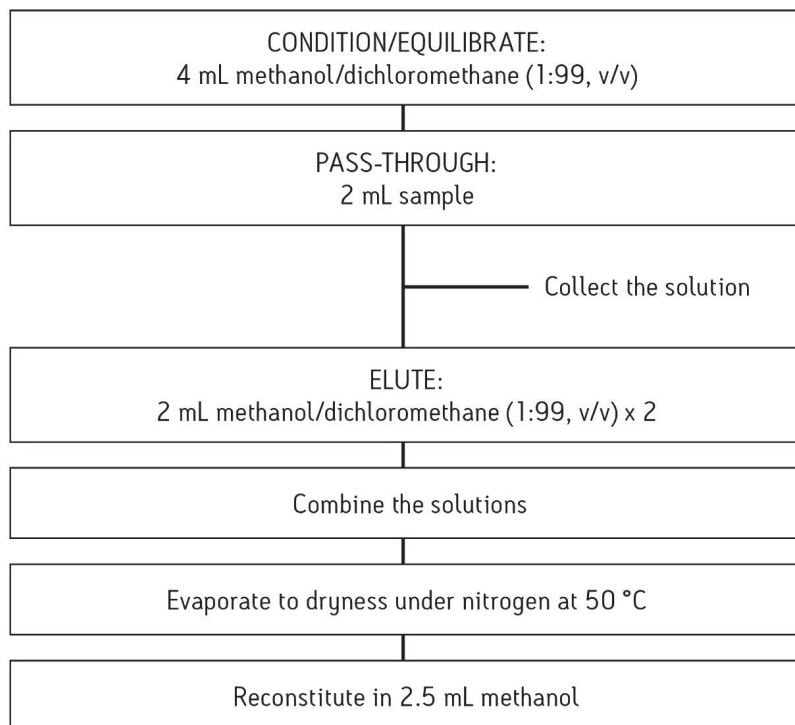

Experimental

Pre-treatment

1. Add 50 mL of acetonitrile to 25 g of sample. Homogenize for 2 minutes and filter.
2. Collect 40-50 mL of filtrate into a flask containing 5–7 g sodium chloride.
3. Shake vigorously for 1 minute. Leave to stand at room temperature.
4. Take 10 mL aliquot from the acetonitrile layer and evaporate sample to dryness (80 °C under nitrogen or air).
5. Reconstitute with 2 mL methanol/dichloromethane (1:99, v/v).

SPE Procedure

Sep-Pak® Aminopropyl 6 cc/500 mg
