

## Solid-Phase Extraction Plus Cartridges

Achieve highly reproducible SPE results with Waters Sep-Pak and Oasis Sample Extraction Cartridges

### INTRODUCTION

Waters™ Sep-Pak™ Cartridges and Plates enable speed and selectivity while simplifying the HPLC, GC, and LC-MS sample preparation process.

- High quality sorbents
- More than 200 chemistries and format combinations
- Reversed-phase, normal-phase, ion-exchange, and application-specific specialty chemistries

Waters Oasis™ Sample Extraction Cartridges and Plates deliver unmatched purity, consistency, and quality for sample analysis.

- Wide choice of configurations, particle sizes, and sorbent chemistries
- Available with all six patented Oasis sorbents—PRiME HLB, HLB, MCX, MAX, WCX, and WAX
- High recovery and reproducible results for a wide range of compounds

### Luer-Inlet Plus Cartridges

- Compliant with ISO 9001
- Female Luer inlet accepts male Luer tip.
- Three cartridge configurations (Plus long, Plus short and Plus light) offering different weights to meet various capacity needs for specific applications
- Broad range of sorbent chemistries that are tested under rigid specifications for chromatographic activities, retention, and selectivity.
- The Plus design is molded for precise dimensions making the cartridge suitable for automation equipment
- Color-coded ring compresses and seals the cartridge while identifying sorbent type

### Double Luer-Lock Plus Cartridges

- Fully compliant with ISO 80369-7 Standard Luer-Lock adaptors, ease-of-connection with any other ISO standard tubings, adaptors and devices.
- Secure Luer-locking connection
  - No dislodgement due to high pressure
  - No spillage which results in no hazardous material cleanup
  - Safely connect multiple Plus cartridges in-series
- Maintain continuity with current Waters SPE Cartridge offerings
- Luer-Tip to Luer-Lock connection capability

Luer-Inlet Plus Cartridges.

## SORBENT CHEMISTRIES

### Reversed Phase (silica based)

- **tC<sub>2</sub>** – trifunctional bonded phase with low hydrophobicity
- **C<sub>8</sub>** – monofunctional bonded phase with moderate hydrophobicity
- **C<sub>18</sub>** – monofunctional bonded phase with high hydrophobicity
- **tC<sub>18</sub>** – trifunctional bonded phase with high hydrophobicity

### Reversed Phase (copolymer based)

- **Oasis HLB** – macroporous copolymer with high hydrophobicity (higher capacity than C<sub>18</sub>)
- **Oasis PRiME HLB** – proprietary sorbent that is designed to effectively remove phospholipids and fats, and some pigments such as chlorophylls

### Reversed or Normal Phase

#### (less polar alternative to silica)

- **Aminopropyl (NH<sub>2</sub>)** – silica based basic polar bonded phase
- **Cyanopropyl (CN)** – silica based polar bonded phase
- **Diol** – silica based neutral polar bonded phase
- **PSA** – silica base bonded with primary secondary amine (stronger base than NH<sub>2</sub>)

### Normal Phase

- **Silica** – polar surface used to adsorb analytes from non-polar solvents
- **Alumina (A, B, N)** – a highly active grade of alumina that is available in acidic, basic and neutral surface chemistries
- **Florisil®** – magnesium metasilicate (MgO·SiO<sub>2</sub>), a polar, highly active, weakly basic sorbent for adsorption of low-to-moderate polarity species from nonaqueous solutions

### Ion Exchange (silica based)

- **Accell Plus QMA** – hydrophilic strong anion exchange with large pore size
- **Accell Plus CM** – hydrophilic weak cation exchange with large pore size

### Mix-Mode Ion Exchange (copolymer based)

- **Oasis MCX** – reversed-phase and strong cation-exchange functional groups
- **Oasis MAX** – reversed-phase and strong anion-exchange functional groups
- **Oasis WCX** – reversed-phase and weak cation-exchange functional groups
- **Oasis WAX** – reversed-phase and weak anion-exchange functional groups

### Specialty Application

- **Sep-Pak Dry** – anhydrous Na<sub>2</sub>SO<sub>4</sub> for removal of residual water from non-aqueous extracts
- **DNPH-Silica** – diphenylhydrazine coated on silica for air analysis of aldehydes and ketones
- **XPoSure** – diphenylhydrazine coated on silica for indoor air monitoring of aldehydes and ketones (larger particle size than DNPH-silica)
- **Sep-Pak Ozone Scrubber** – potassium iodide used in series with DNPH-silica and XPoSure Cartridges to remove ozone interferences
- **AC-2** – activated carbon used to concentrate highly polar small molecules such as 1,4-dioxane, pesticides and herbicides
- **PS-2** – styrene-divinylbenzene copolymer used to concentrate pesticides, herbicides and PFAS compounds
- **Potassium Carbonate** – a solution of potassium carbonate can be used to ion-exchange chloride ion with carbonate ion

## ORDERING INFORMATION
